

National Severe Weather Warning Service

Chief Forecasters Assessment

Showers of rain, sleet and snow are expected on Wednesday night and Thursday morning, with snow most likely inland away from immediate coastal areas and over hills. The extent of ice will vary across the area with inland areas most prone whilst coastal areas exposed to the northerly winds are less likely to be affected. 1 or 2 cm of snow may accumulate above about 100 m, with perhaps 5 cm or more locally over the higher ground of North Highland. Temporary deposits may also occur at lower levels, mainly late in the night.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **15:00 on Wed, 27th Dec 2017** until **12:00 on Thu, 28th Dec 2017**

Icy patches are expected on Wednesday night and Thursday morning.

Icy patches are expected to develop on untreated surfaces, pavements and cycle paths and where showers wash off treatment. Some injuries from slips and falls on icy surfaces may occur.
